

Sample Report for LlamaIndex Tutorial

This is a sample PDF document created for testing LlamaIndex with local models using Ollama.

LlamaIndex is a framework that helps connect your custom data with large language models. It enables indexing, retrieval, and querying of documents such as PDFs, CSVs, and text files.

Key Features:

- Easy document ingestion - Supports multiple data formats - Works with local and cloud-based LLMs - Enables Retrieval-Augmented Generation (RAG)

You can now use this PDF to test querying like: 'Summarize the document' or 'What are the key features of LlamaIndex?'
